

WHAT IS CLAIMED IS:

1 1. A telecommunications call center, comprising:
2 a database for storing call information;
3 a query engine operably coupled to said database; and
4 a graphical user interface coupled to provide query parameters in a text form;
5 and
6 wherein said query engine is adapted to translate said query parameters into
7 a database-readable form.

1 2. A telecommunications call center in accordance with claim 1, said
2 database-readable form comprising a Structured Query Language (SQL) form.

1 3. A telecommunications call center in accordance with claim 2, wherein
2 results of a query are provided to said graphical user interface in a text-readable
3 form.

1 4. A method, for use in a telecommunications call center, comprising:
2 inputting call center database text query information into a graphical user
3 interface;
4 translating said call center database text query information into a database-
5 readable query; and
6 returning a result of said database-readable query to said graphical user
7 interface for display.

1 5. A method in accordance with claim 4, said translating comprising
2 translating into a Structured Query Language (SQL) form.

1 6. A method in accordance with claim 5, said inputting further comprising:
2 selecting one or more fields to view from a first graphical user interface
3 window; and
4 selecting predetermined criteria to apply to said fields using a second

5 graphical user interface window.

1 7. A telecommunications system comprising:
 2 one or more telecommunications networks;
 3 a switch configured to switch calls between devices on said one or more
 4 telecommunications networks; and
 5 a call center adapted to monitor calls through said switch, said call center
 6 including
 7 a database for storing call information;
 8 a query engine operably coupled to said database; and
 9 a graphical user interface coupled to provide query parameters in a
 10 text form; and
 11 wherein said query engine is adapted to translate said query
 12 parameters into a database-readable form.

1 8. A telecommunications system in accordance with claim 7, said database-
 2 readable form comprising a Structured Query Language (SQL) form.

1 9. A telecommunications system in accordance with claim 8, wherein results
 2 of a query are provided to said graphical user interface in a text-readable form.

1 10. A telecommunications system in accordance with claim 9, said graphical
 2 user interface comprising
 3 a first screen for selecting fields for searching;
 4 a second screen for entering search criteria for said fields; and
 5 a third screen for displaying results of said searching.

1 11. A method, comprising:
 2 providing one or more telecommunications networks;
 3 providing a switch configured to switch calls between devices on said one or
 4 more telecommunications networks; and

5 providing a call center adapted to monitor calls through said switch, said call
 6 center including
 7 a database for storing call information;
 8 a query engine operably coupled to said database; and
 9 a graphical user interface coupled to provide query parameters in a
 10 text form; and
 11 wherein said query engine is adapted to translate said query parameters into
 12 a database-readable form.

1 12. A method in accordance with claim 11, said database-readable form
 2 comprising a Structured Query Language (SQL) form.

1 13. A method in accordance with claim 12, wherein results of a query are
 2 provided to said graphical user interface in a text-readable form.

1 14. A method in accordance with claim 13, said graphical user interface
 2 comprising
 3 a first screen for selecting fields for searching;
 4 a second screen for entering search criteria for said fields; and
 5 a third screen for displaying results of said searching.

1 15. A telecommunications method for providing a call center, comprising:
 2 providing a database for storing call information;
 3 providing a query engine operably coupled to said database; and
 4 providing a graphical user interface coupled to provide query parameters in a
 5 text form; and
 6 wherein said query engine is adapted to translate said query parameters into
 7 a database-readable form.

1 16. A telecommunications method in accordance with claim 15, said
 2 database-readable form comprising a Structured Query Language (SQL) form.

1 17. A telecommunications method in accordance with claim 16, wherein
2 results of a query are provided to said graphical user interface in a text-readable
3 form.

5

17. A telecommunications method in accordance with claim 16, wherein
results of a query are provided to said graphical user interface in a text-readable
form.
